#### Overview:

Book Store offers you over one million titles across categories such as Science's Books, History & Art, Geography and Religion.

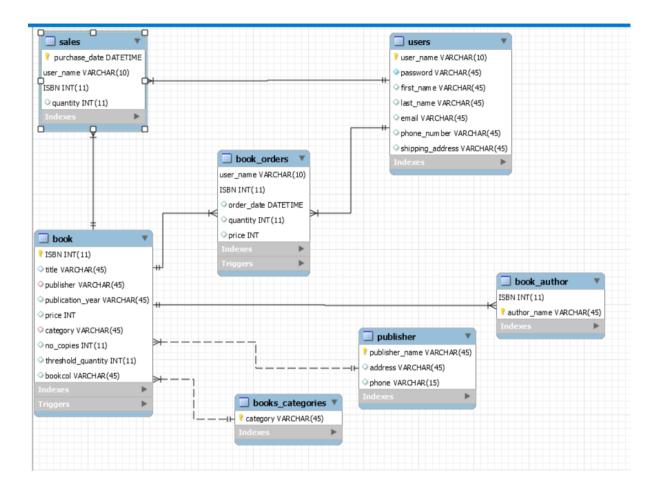

Reading books is the favourite pastime of many people. If you're bitten by the book-bug too, then there is a massive collection of books for you to read. From bestsellers to new & future releases, the choices are exhaustive when you visit Largest Bookstore.

## Problem statement:

You are required to analyze, design and implement a database system to support the operations of a simplified online bookstore.

Also, you are required to create the necessary forms to perform these operations.

## • The Database EER diagram:

## Triggers:

1. **Books before insert**: to ensure that the number of available copies of a certain book never goes below threshold, before inserting into the 'Book' relation.

```
DELIMITER ;;

CREATE TRIGGER books_BEFORE_INSERT BEFORE INSERT ON book

FOR EACH ROW BEGIN

IF ( NEW.no_copies < NEW.threshold_quantity) THEN

SIGNAL SQLSTATE '45000'

SET MESSAGE_TEXT = 'NO OF COPIES INSERTED CANNOT BE LESS THAN THE THRESHOLD';
END IF;
END ;;
DELIMITER ;</pre>
```

2. **Books before update:** to ensure that the number of available copies of a certain book never goes below 0, before updating the 'Book' relation.

```
DELIMITER ;;

CREATE TRIGGER books_BEFORE_UPDATE BEFORE UPDATE ON book
FOR EACH ROW BEGIN

IF (NEW.no_copies < 0) THEN
    SIGNAL SQLSTATE '45000'
    SET MESSAGE_TEXT = 'NO OF COPIES CANNOT BE NEGATIVE';
END IF;
END ;;
DELIMITER ;</pre>
```

3. **Books** after update places a new order to the 'Order' relation when the number of available copies of a certain book drops down below its specified threshold on updating the 'Book' relation.

```
DELIMITER;;

CREATE TRIGGER books_AFTER_UPDATE AFTER UPDATE ON books

FOR EACH ROW BEGIN

if new.no_copies < new.threshold_quantity then
insert into book_orders (ISBN,order_date,quantity,price) values

(NEW.ISBN,NOW(),NEW.threshold_quantity - new.no_copies, NEW.price * (NEW.threshold_quantity - new.no_copies));
end if;

END ;;

DELIMITER;
```

4. **book order before delete:** deletion of a record from the 'Order' relation indicates that this order has been received, so the quantity of books in the order are added to the available copies of the

```
DELIMITER ;;

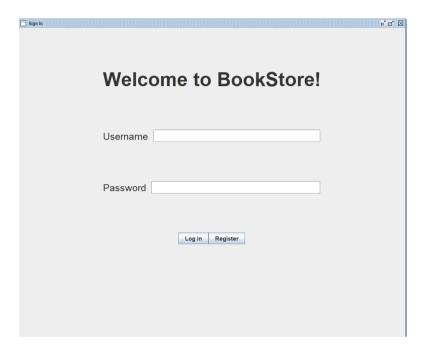

CREATE TRIGGER book_orders_BEFORE_DELETE BEFORE DELETE ON book_orders
FOR EACH ROW BEGIN

UPDATE book SET book.no_copies = (book.no_copies + OLD.quantity)
where book.ISBN = OLD.ISBN;
END ;;
DELIMITER ;
```

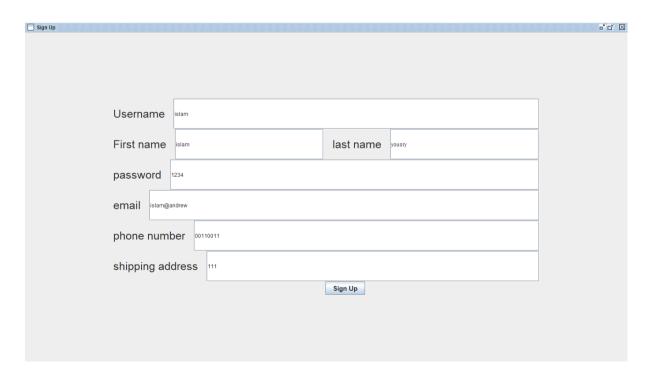

specified book.
